Polishing and buffing.

Carlson Jr, G A
Acme Manufacturing
USA, 1994

Prod. Finish. (Cincinnati) 59, (2A, (Suppl.)), 310,312,314,316-317

Nov. 1994

ISSN: 0032-9940

Country of Publication: USA

Journal Announcement: 9601

Language: ENGLISH

Abstract: Polishing and buffing of functional (e.g. transmission shafts, gears, medical prosthesis or implants) or decorative parts (e.g. decorative locks, cookware, golf clubs, motorcycles) is often necessary. In this industry there is a definite trend to minimize hand polishing and an increase in using automated systems. Specific examples of automated buffing/polishing systems for use on brass hardware, engine cylinder heads, aluminum wheels and plumbing housings that are based on new finishing media, robotics, and CNC technology are discussed.

Study and Application of GL-90 P/M Steel for Motorcycle Parts.

Yang, D T ; Wang, J ; Chen, A H ; Xia, D R

East China Institute of Technology

Powder Metallurgy Technology (China) 10, (4), 274-281 1992

ISSN: 1001-3784

Country of Publication: People's Republic of China

Journal Announcement: 9311

Language: CHINESE

Abstract: The relations between mechanical properties and microstructures and densities and tempering temperatures of high strength heat treatable GL-90 P/M steel have been tested. After being hardened in controlled atmosphere and tempered at low temperature, P/M steel with the density > 6.90 g/cm³ had a structure with fine bundles of strip martensite and the optimum combination of mechanical properties, similar to Japanese H-90 heat treated P/M steel and had high strength up to 890 MPa and wear resistance superior to 45 lb steel. The inner and outer sleeve irregularly shaped gears of transmission shaft for Jincheng motorcycle have been successfully made from GL-90 P/M steel. Graphs; Photomicrographs. 2 ref.

Recent Trends of Precision Forging for Motor Parts.

Maki, T

Denki Seiko (Electric Furnace Steel) 61, (1), 48-54 Jan. 1990

ISSN: 0011-8389

Journal Announcement: 9103

Language: JAPANESE

Abstract: The history of precision forging technology for motor parts began with transmission gears and transmission shafts for motorcycles in

1963, and now it has spread to many gears for automobiles. Since 1980, as production of "C--V (constant velocity joints)" has multiplied with a rapid increase in F.F. Car, precision forging technology of its components has developed quickly. Especially practical technology of cold forging in big parts, semi-hot forging and closed die forging have progressed markedly. From now on, advance of precision forging technology will be accelerated more with high precision steel bars, progress of die material, improvement of forging system and so on. Graphs. 10 ref.--AA

ABSTRACT: Based on information presented at the 1993 annual general meeting of Assogomma, a survey is made of economic trends in the Italian rubber industry in 1992. Statistics are given for production of tyres and non-tyre products, rubber consumption and imports and exports of rubber goods in 1991 and 1992.

ABSTRACT: The invention and production of a belt made on a polyurethane elastomer body, which will replace the chain drive on **motor cycles**, has been announced by the above company. The belt, named Poly Chain, is

a toothed belt that functions in much the same manner as chain or gear drives. The PU elastomer body forms the teeth of the belt and the durable cover. Aramid fibre tensile members provide the strength necessary to transmit the **motorcycle** power output.

ABSTRACT: A brief description is given of a new **drive belt** for a new Harley-Davidson **motorcycle**. The belt is manufactured in a vacuum centrifugal-casting process from three materials:- PU elastomer, which makes up the body of the belt including the teeth and back, nylon fabric, which provides a low-friction, wear resistant surface for the teeth and aramid fibres which give the belt high tensile strength.

ABSTRACT: Quaint ideas from the early days of motorcycling are reviewed, with their original illustrations reproduced. In 1931, "Popular Mechanics" featured a new concept on its cover, a "tractor **motorcycle**" (shown climbing a mountain). In 1922, the Solomobile was offered, a wooden **motorcycle** do-it-yourself kit which featured a flat felt pad seat engine not included). A 1910 model was made from plumbing pipe. Two other cycles were also designed in 1910: one was among the earliest applications of the **motorcycle** in life-saving roles, an English three-wheeled firefighter equipped with light ladders and hoses; and a **motorcycle** produced in Maine had two extra rear wheels mounted on either side of the main driving wheel. On level pavement the extra wheels did not contact the road, but acted as stabilizers on negotiating a curve. "Popular Mechanics" ran a drawing in 1911 of a snowsled on wheels. In 1910, the English introduced the "weather-protected" sidecar attached by a third **wheel** , designed mainly for bachelors. A **wide** variety of etched-glass windshields was made available, depicting the woman of the rider's choice. In 1917, a mechanic built a steam-powered **motorcycle** , the Steam Bike, which had a generous 75 in. wheelbase, and a seat mounted on a movable clamp. In 1911, "Popular Mechanics" described a **motorcycle** with an aluminum shaft drive and worm gear; the exposed engine was mounted on the frame between the driver's feet. A final concept, pictured on an early cover of "Science and Mechanics," illustrated a cycle chariot race.

ABSTRACT: There is a lot of new growth to be seen in the German offshoot of Cooper-Avon Tyres. Staff, products and marketing concepts feature greatly in this. It is also called Cooper-Avon Reifen. With the acquisition of the English parent company Avon Tyre by the American tyre producer Cooper from Findlay in Ohio, a new era has begun for the German subsidiary in Wilnsdorf, Siegerland. Management changes are reviewed, along with a range of new Cobra and Avon car **tyres**, covering the **wide tyre** market. Involvement of **motor cycle** tyre sales is examined, also imports, event marketing and Cooper's multibrand strategy. Avon's time-honoured brand ranks somewhere between Fulda and Pneumant. Other topics touch on dealer marketing and customer support.

ABSTRACT: The issue of fitting an old **motor cycle** with modern tyres forms the focus of this article. The question arises what tyres are allowed. A table is given for a **wide range of motor cycle tyres**, showing brands and available sizes for front and rear wheels to fit two classic **motor cycles**, the Kawasaki GPX750R and the Suzuki GSX-R1100. Issues of post-homologation are addressed. Belted **motor cycle** tyres with diagonal carcasses are discussed in relation to these **motor cycles**, as well as Metzeler's tyre advisory service on the Internet. Opportunities for finding out about new releases are evaluated, including the 'Moris' software from the tyre firm Reifen Krupp.

SUBFILE: (R) RAPRA

ABSTRACT: Germany's market leader from Munich, hitherto known as a high-tech tyre manufacturer for supersport **motor cycles**, is strengthening its market share of scooter tyres. Metzeler's new ME 7-Teen scooter tyre range is reviewed regarding its popularity, its suitability for a wide range of scooter engine capacities and its development as a radial tyre taking its tread pattern from the successful Metzeler high performance ME Z1 radial tyre. The ME 7-Teen range is being fitted to scooters like the Aprilia SR 50 Replica, creating the sporty image we expect in a supersport **motor cycle** like the Suzuki GSX-R 750 fitted with Metzeler ME Z1 tyres. The transverse tread pattern of the ME 7-Teen range is discussed, including wet grip properties and groove pattern. Also covered is the running surface contouring, as well as the safety of tread and the nylon carcass construction. A full fitting cart for the ME 7-Teen range is included in this article, listing all types of suitable scooter makes.

ABSTRACT: The business performance of Bridgestone/Firestone Deutschland GmbH is reviewed for the first ten months of 1996. The business turnover is looked at, alongside growth in its market share, fall-off in the winter tyre trade and the poor performance in the heavy vehicle tyre business. The streamlining of business practices and the use of computer systems are both discussed. New products are reviewed such as the Bridgestone BT 56/57 **motor cycle** tyres, the Bridgestone S-02 ultra-high performance **wide tyre**, Firestone agricultural **tyres** and the new Bridgestone WT11 winter tyre.

SUBFILE: (R) RAPRA

ABSTRACT: The Sparrow composite urban commuter car is on track for production to begin about August 1997 at a plant in Hollister, California. Corbin-Pacific first announced the electric car in December. The innovative composite car was developed by a **motorcycle** aftermarket seat manufacturer to meet the apparent market opportunity derived from the fact that an estimated 87% of the US population commutes less than 18 miles to work and back daily (with the vast majority being alone). Debuted at the San Francisco Auto Show, the Sparrow is classified as a **motorcycle** for commuter purposes, as the driver occupies 100% of the solo seating capacity. A monocoque composite chassis and a monocoque composite body or aeroshell comprise the vehicle. These two primary components along with 540 lb of batteries and other components total 990 lb for the entire 3- **wheel** car, which is 4 ft. **wide** and 8 ft. long. The composite components are fabricated using the resin transfer moulding method with E-glass fibre reinforcement in a polyester resin matrix. Brief details are given.

ABSTRACT: Malaysia produces a **wide** range of **tyres** , from bicycle **tyres** to high technology tyres for aircraft. Output in 1995 is estimated at 11.4m units. Turnover in the last 15 years has risen from 300m Malaysian dollars in 1980 to 1.1bn Malaysian dollars in 1995. Exports remain a significant part of turnover, accounting for 10-35% among individual companies. Four firms currently dominate the domestic market: DMIB, Goodyear (Malaysia), Sime Tyres and Silverstone. Competition between these four companies in the domestic market is intense and has led to fierce discounting.

ABSTRACT: Cheng Shin **Tire** produces quite a **wide** range of **tyres** , many covering specialised applications. Because they are so specialised, quantities are relatively low, although there are relatively fewer companies taking a share of these markets. Details are given of the company's current set-up and future plans.
